## FOOTNOTES

1 Your infant may not need this dose depending on the type of vaccine that your health-care provider uses
2 This dose of DTaP may be given as early as age 12 months if it has been 6 months since the previous dose.

3 If your child's vaccinations are overdue or missing, get your child caught up as soon as possible. If your child has not completed a series of vaccinations on time, he or she will need only the remainder of the vaccinations in the series. There's no need to start over.
